

# Intrafix® SafeSet

Gives every ward that extra measure of safety while providing higher efficiency

Fluid administration

# Meet today's challenges ...

## You are frequently under pressure, wishing you had more than two hands

It is your responsibility to keep everything under control. You have to tackle complex tasks involving multi-drug regimens and complicated infusion systems. Especially nowadays, time has become a priceless commodity. Hour by hour, day by day, your job is to prepare, prime, monitor and change innumerable infusions. You aim to give the best care humanly possible and to never make a mistake – even in stressful situations. That's why you need an IV administration set that lets you overcome these challenges.

## Intrafix® SafeSet – with AirStop and PrimeStop

Thanks to AirStop in the drip chamber – the sight of a container running empty is no longer cause for alarm and no reason for energy and time to be wasted rushing around because the patient gets upset.

Thanks to PrimeStop at the patient connector – you can now prepare several infusions at once, quicker and more hygienic than ever before. Right away your hands are free to prepare the next infusion.

### Innovative, high-sophisticated depth filter membrane

- AirStop–safety in case of emptied fluid container
- Higher filtration efficiency of 15  $\mu\text{m}$  and better

### Roller Clamp New in design and function

PVC tubing  
DEHP-free

NEW:  
DEHP-free

# ... the safest and most convenient way

## Air Stop

**The innovative AirStop helps prevent air infusion, won't let the line run dry**

When the container is empty, AirStop maintains a constant fluid level. No air can get through to the patient.

### Depth filter – the filter with the two advantages

A unique airtight filter membrane acts as a barrier, protecting against air infusion while retaining particulate matter 15 µm and below. Thanks to AirStop switching over to next container requires less manipulations like system opening, risk free respiking, less stress, more calm on the ward.

## Prime Stop

### Protective cap

A new protective cap lined with a hydrophobic membrane stops fluid leaking and protects against contamination.

### PrimeStop automates priming and ends messy dripping

- PrimeStop ensures that the line fills automatically.
- No more infusion fluid drips on hands, floor or bedding.
- Now you can prepare several infusions at once, quicker and more hygienic than ever before.
- PrimeStop maintains a closed system until connected to the patient.
- Effective contamination prevention.

## Further attractive features

### Good to control flow rate

Roller Clamp, new in shape and function: comfortable to hold and handle, more accurate to set the droprate, easier to roll. Instant drop speed adjustment. The large-dimensioned roller clamp enables secure gripping.

### Spike dock for secure discard

The spike dock is an added feature that protectively covers the drip chamber spike after use.

### Comfortable tube dock

Patient connector and the tubing can be hooked into the side notch after priming for stand-by procedures.

### Luer-Lock fitting for safe connection

Insert the connector tip, screw in tightly with a quick twist. Prevents inadvertent disconnection.

All Design features in accordance with ISO 8536-4/8

Universal, clear ISO spike:

Easy to spike

Long drop former, 20 dr.  $\triangleq$  1 ml,

Highly transparent dome design

Good to see drop forming

The ideal filling level

to prevent air entrapment

Elastic pump chamber:

Easy and fast priming

Clear PVC tubing, DEHP-free,  
good clarity, good handling flexibility  
and priming ability, untangles easily

Standard 180 cm in length

Screw-tight luer-lock fitting  
with PrimeStop Cap

For safe connection to the  
patient access

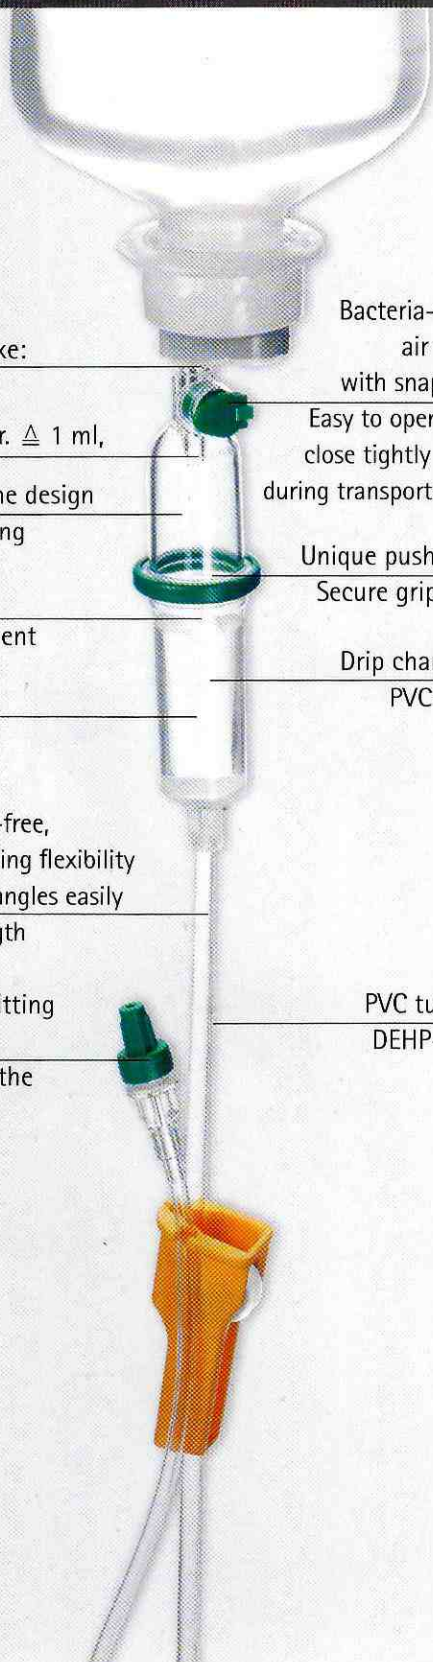

Bacteria-tight  
air vent,  
with snap cap

Easy to open and  
close tightly even  
during transportation

Unique push ring  
Secure gripping

Drip chamber  
PVC-free

PVC tubing  
DEHP-free

### Intrafix® SafeSet: Best Standard

- Helps prevent air infusion and infusion-related infection
- Significantly reduces work load
- Saves time and costs
- Safe Priming - ensures a closed system.
- Infusion lines softened with DEHT, the new generation of non-phthalate plasticizers. Patient safety first
- New Roller Clamp - finer, more flexible control of flow rates. Easier to select drop rates

# Choose your best Intrafix® SafeSet option

## Intrafix® SafeSet Global Product Portfolio

	Specification	Length of tubing	Code No. (REF)
Intrafix® SafeSet	Basic	180	406 3000
	B.C.V. (Back Check Valve)	180	406 3001
	N.T.P. (Neutrapur® tubing, PVC-free)	180	406 3002

**DEHP-/  
Latex-free**

Sales unit/Pcs.: 100

### Modern Infusion Therapy with Intrafix® SafeSet

- Greater convenience
- Higher level of safety
- Better performance

A comparative study<sup>1)</sup> versus conventional IV administration sets has proven that Intrafix® SafeSet reduces the time needed to set up an infusion including the related costs.

1) Frei A., Profitability analysis of Intrafix® SafeSet when used in peripheral venous gravity infusions (2003, submitted for publication).

#### Product Overview

NuTRIflex® 2-Chamber Bags

NuTRIflex® Lipid 3-Chamber Bags

## NuTRIflex®- Lipid 3-Chamber Bags

3-chamber bag with MCT/LCT as lipid component, amino acids and carbohydrates for patients with need of Parenteral Nutrition.

#### Parenteral nutrition products

2-chamber bag  
3-chamber bag

#### Product range

##### NuTRIflex® Lipid peri

Peripheral parenteral nutrition  
Supplementary nutrition  
In combination with enteral nutrition  
Specially designed for Low Glucose Nutrition (LGN) Therapy (peripheral and central venous)

##### NuTRIflex® Lipid plus

Central venous parenteral nutrition for moderately increased requirements  
Easy to calculate: 1 ml = 1 kcal

##### NuTRIflex® Lipid special

If volume-restricted parenteral nutrition is required  
In situations with high nutritional demands  
625 ml version as ICU starter bag and for combined enteral/parenteral nutrition

##### NuTRIflex® Lipid without electrolytes (plus and special)

For individualized electrolyte administration

#### Characteristics

Allows the simultaneous administration of required nutrients out of one container  
Contains MCT/LCT 1 lipid emulsion  
Electrolyte-containing versions cover the basic needs for electrolytes and zinc  
Electrolyte-free versions for individualized electrolyte administration  
Easy and safe handling  
24-month shelf life at room temperature

#### Accessories

Light Protection Cover:  
NuTRIflex® Lipid 1250 ml, 1875 ml, 2500 ml (Art. No. 211 2112)  
NuTRIflex® Lipid 625 ml (Art. No. 212 9035)
