To,

Prof. Suchitra Devi

HOD, Ophthalmology Department,

Regional Institute of Medical Sciences, Imphal

We would like to provide a brief introduction to four unique features of Centurion Vision System:

- 1. Centurion Ozil Technology:** OZiL™ - brand name - Torsional Phaco Handpiece. Oscillatory torsional amplitude creates lateral tip movement that cuts more efficiently due to less repulsion, and results in decreased thermal energy at the incision. OZiL operates 32 kHz, 20% lower than longitudinal U/S. More efficient (less energy time) side-to-side cutting displacement vs. longitudinal only cutting on the down stroke
- 2. Centurion Active Fluidics:** Active Fluidics is the automated pressurized smooth control of irrigation flow into the eye. Active Fluidics enables the surgeon to have a targeted Intra Operative Pressure of the eye throughout the surgical/phaco procedure. The Ocular rigidity maintained by Active Fluidics is unique to the Centurion Vision System and is a perfect complement to the Ozil platform.
- 3. Autosert Handpiece:** Autosert HP is used for automated IOL delivery System and it is unique to Alcon's Centurion Vision System.
- 4. Programmable IOP:** Centurion Vision System has another feature of Programmable targeted IOP setting. By this feature Surgeon can prefix the Ocular rigidity at a preset parameter. This helps the surgeon to get a stable chamber throughout the surgical procedure.
